

PROJECT TITLE : A MOBILE BASED PHOTO EDITING
APPLICATION WITH ALL STANDARD IMAGE EDITING
FEATURES

PROJECT PRESENTATION

By

:- NIKHIL MISHRA(181500426)

:- VED PRAKASH CHAUBEY(181500785)

ABSTRACT

Photo editing can be a challenging task, and it becomes even more difficult on the small, portable screens of mobile devices that are now frequently used to capture and edit images. To address this problem I present Photo Editor, a photo editing interface for direct manipulation. Through this application user can easily and quickly edit there pictures with the help of the features provided in the application. Some of the features of the application are: - One tap Auto Enhance, Ability to Crop, rotate and straighten your photo, Adjust brightness, contrast and saturation, adding effects like blur, snowy, emboss, engrave, etc. All the coding has been done in JAVA language using a plugin of Android IDE i.e. Android Development Tools (ADT).

INTRODUCTION

The project “PHOTO EDITING ANDROID APPLICATION” is developed using Android IDE and Android SDK manager using JAVA language. This project has been developed for busy customers, Photo Editor is an easy to use Android application through which customers can easily edit photos using various features provided in the application. Its graphical user interface is designed in a manner to attract wide variety of people varying from age group of 15 years to 55 years. The editing methods are optimized in such a way so that user can quickly and easily edit their photographs without wasting much of their time. Hence it's quick, easy and efficient.

Problem Statement

To develop a Photo editing Android application with a quick and easy way to edit photos having both basic and advance level features to edit your photographs.

WORKING ENVIRONMENT

About Android:- Android is an open source operating system, created by Google, and available to all kinds of developers with various expertise levels, ranging from rookie to professional. From a developer's perspective, Android is a Linux-based operating system for smartphones and tablets. It includes a touch screen user interface, widgets, camera, network data monitoring and all the other features that enable a cell phone to be called a smartphone. Android is a platform that supports various applications, available through the Android Play Store. The Android platform also allows end users to develop, install and use their own applications on top of the Android framework. The Android framework is licensed under the Apache License, with Android application developers holding the right to distribute their applications under their customized license.

LITERATURE SURVEY

In order to fully understand the impact of this photo viewer and editor in an industrial scenario, it is important to first take a back-seat and ensure what a photo editor conjures up with, by having feasibility study and evaluating various scenarios, and why it should be implemented and from what perspective it will be accountable? Lastly, the conceptual literature review will focus on how an innovative and practical application can be implemented alongside the pre-existing applications in the modern trends of an industrial scenario, keeping in mind both the subject world and the usage world. The facets that this photo editor deals with to innovate in designing this application which would help us in image viewing and editing. The existence of this very model will furnish individuals with a sense of confidence to experiment and examine with various facets and genres of image viewing from the app store perspective along with image editing.

Methodology

A good interface can be understood by the user. after being observed, it can be investigated how to construct a workflow for creating high quality image editing on mobile application. The way is quite simple, users just open a photo, then edits and save.

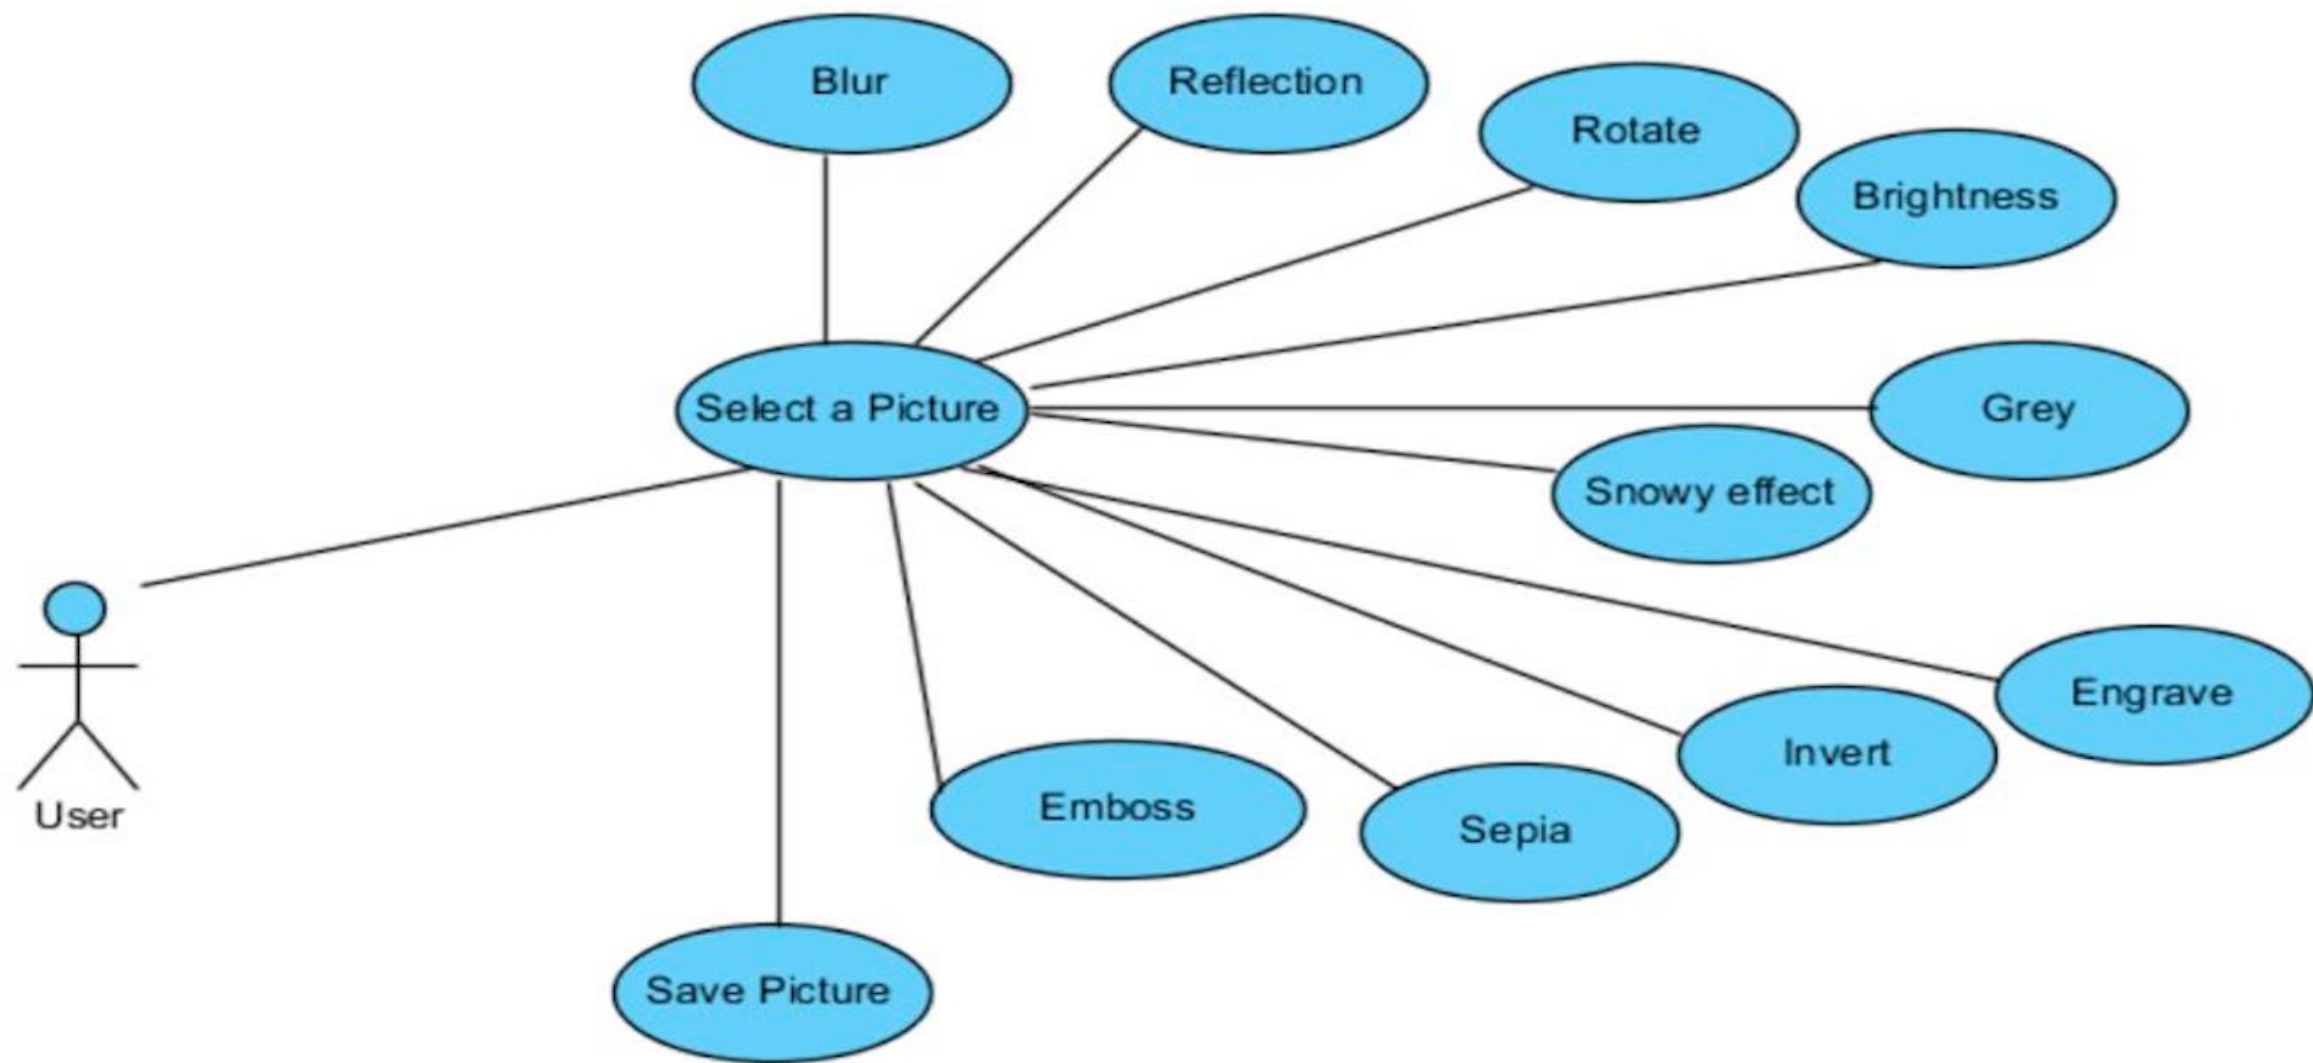

Instructions

This activity is meant to introduce you to your software editing program in a more in-depth way. At the end, you should be able to easily repeat the steps necessary to open up a given tool at any time.

1. Open your photo editing Application program.
2. Open up a photo file (it's easier to open up tools when you have a photo loaded into your program).
3. With your photo editing journal open beside you, find and open each of the following tools. For each tool, write down the path of how you got there. For instance, the best way to do it is like this: "Brightness: Edit> Adjust> Brightness" ,etc.

```
object to mirror  
mirror_mod.mirror_object =  
operation == "MIRROR_X":  
mirror_mod.use_x = True  
mirror_mod.use_y = False  
mirror_mod.use_z = False  
operation == "MIRROR_Y":  
mirror_mod.use_x = False  
mirror_mod.use_y = True  
mirror_mod.use_z = False  
operation == "MIRROR_Z":  
mirror_mod.use_x = False  
mirror_mod.use_y = False  
mirror_mod.use_z = True  
  
selection at the end -add  
ob.select= 1  
for ob.select=1  
context.scene.objects.active  
("Selected" + str(modifier  
mirror_ob.select = 0  
= bpy.context.selected_obj  
data.objects[one.name].sel  
print("please select exactly  
-- OPERATOR CLASSES -----  
  
types.Operator):  
X mirror to the selected  
object.mirror_mirror_x"  
mirror X"
```

Future Work:-

The Future Work for the Application will include the following:

1. Adding more photo editing packages.
2. Integration with social networking websites like Facebook, Twitter etc.
3. Layers functionality like in that of Adobe Photoshop.

CONCLUSION

This app gives user the power to edit their picture easily and efficiently. Its an application which can be used by people of all ages who knows how to use a smartphone. The application uses minimum CPU memory and doesn't compromise with its performance. The editing is fast and smooth and its GUI is easy to use. There are many features which can be added to the app and those features will be added time to time with its regular updates.

THANK YOU
